HTDA
HIGH TECH DATA AUDIT
LOGICIEL INTELLIGENT POUR L'AUDIT

Audit As A Service

Presentation at Forum of Firms – 7 December 2017 – Florian Quinquis

SUMMARY

- I. Principle
- II. “AAAS” Audit as a service
- III. Mission - Core Team
- IV. Platform
- V. Example of POC : work in progress
- VI. Questions

PRINCIPLE

- Process based on collection of all or part of the data for each operation in the system.
- Collection by origin, type, date and all necessary information for processing the data.
 - For every operation, date & chronology are recorded.
- Chronological and temporal grids.
- Single, cumulative and balanced volumetric grids.
- External grids:
 - Location, weight, nomenclatures, identification
- An operating system for checking by reconciliation.
 - Automatic, dynamic

PRINCIPLE

- More than a simple cube
- A multidimensional approach with :
 - Enterprise process
 - Staff
 - Date & Time recorded and real process
 - Value
- Based on AI and Machine Learning mechanism

MISSIONS & CORE TEAM

- *HTDA offers a new way of auditing based on the incredible progress of technology*
 - Real Time data collection with API & ETL; Open Source Data; AI to explore, aggregate and analyse data; Very high volume of data manipulated)
- **Jean François Serval:** A visionary in the state of the art of audit (Constantin, Groupe Audit, ...) and a new approach of the audit (combination of humans and technology),governance committee.
- **Philippe Coup-Jambet:** A Serial web entrepreneur in software and web(PayTop, Tekora, ISO, Andyne) with competences in FinTech, Business Intelligence, ETL, Datamining, Platform Saas.
- A Scientific committee, Strategic committee and Partnerships with Labex-Refi Sorbonne, Stony Brook.
- A team of experts in ETL / Datatake / Big Data / BI / Mathematics / Data Scientist

HTDA : The first « AAAS » platform ? Audit As A Service

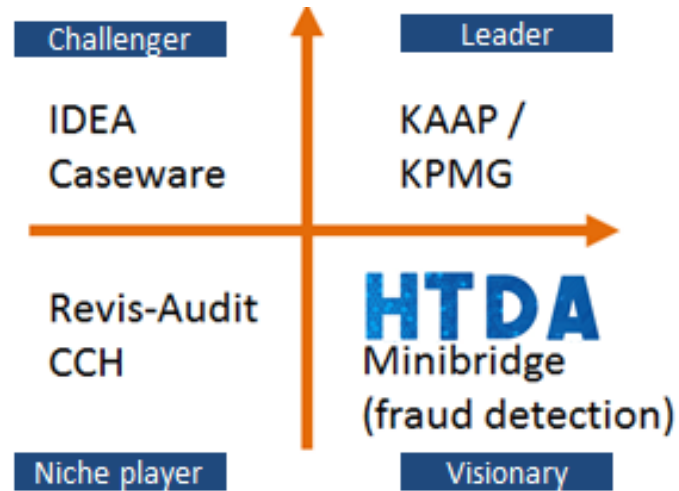

- AAAS is based on a highly secured platform autonomously usable by corporates and auditors.
- API / ETL allow the real-time collection and processing of transactions data as well as their evolutions (creation, modification, removal) over time.
- AI and Machine Learning make possible the processing of high volumes of data and software generated control regulations.
- A high Level of security to protect data , access to the data lake and the HTDA engine.

HTDA : The first « AAAS » platform ? Audit As A Service

- Audit tools benchmarking :

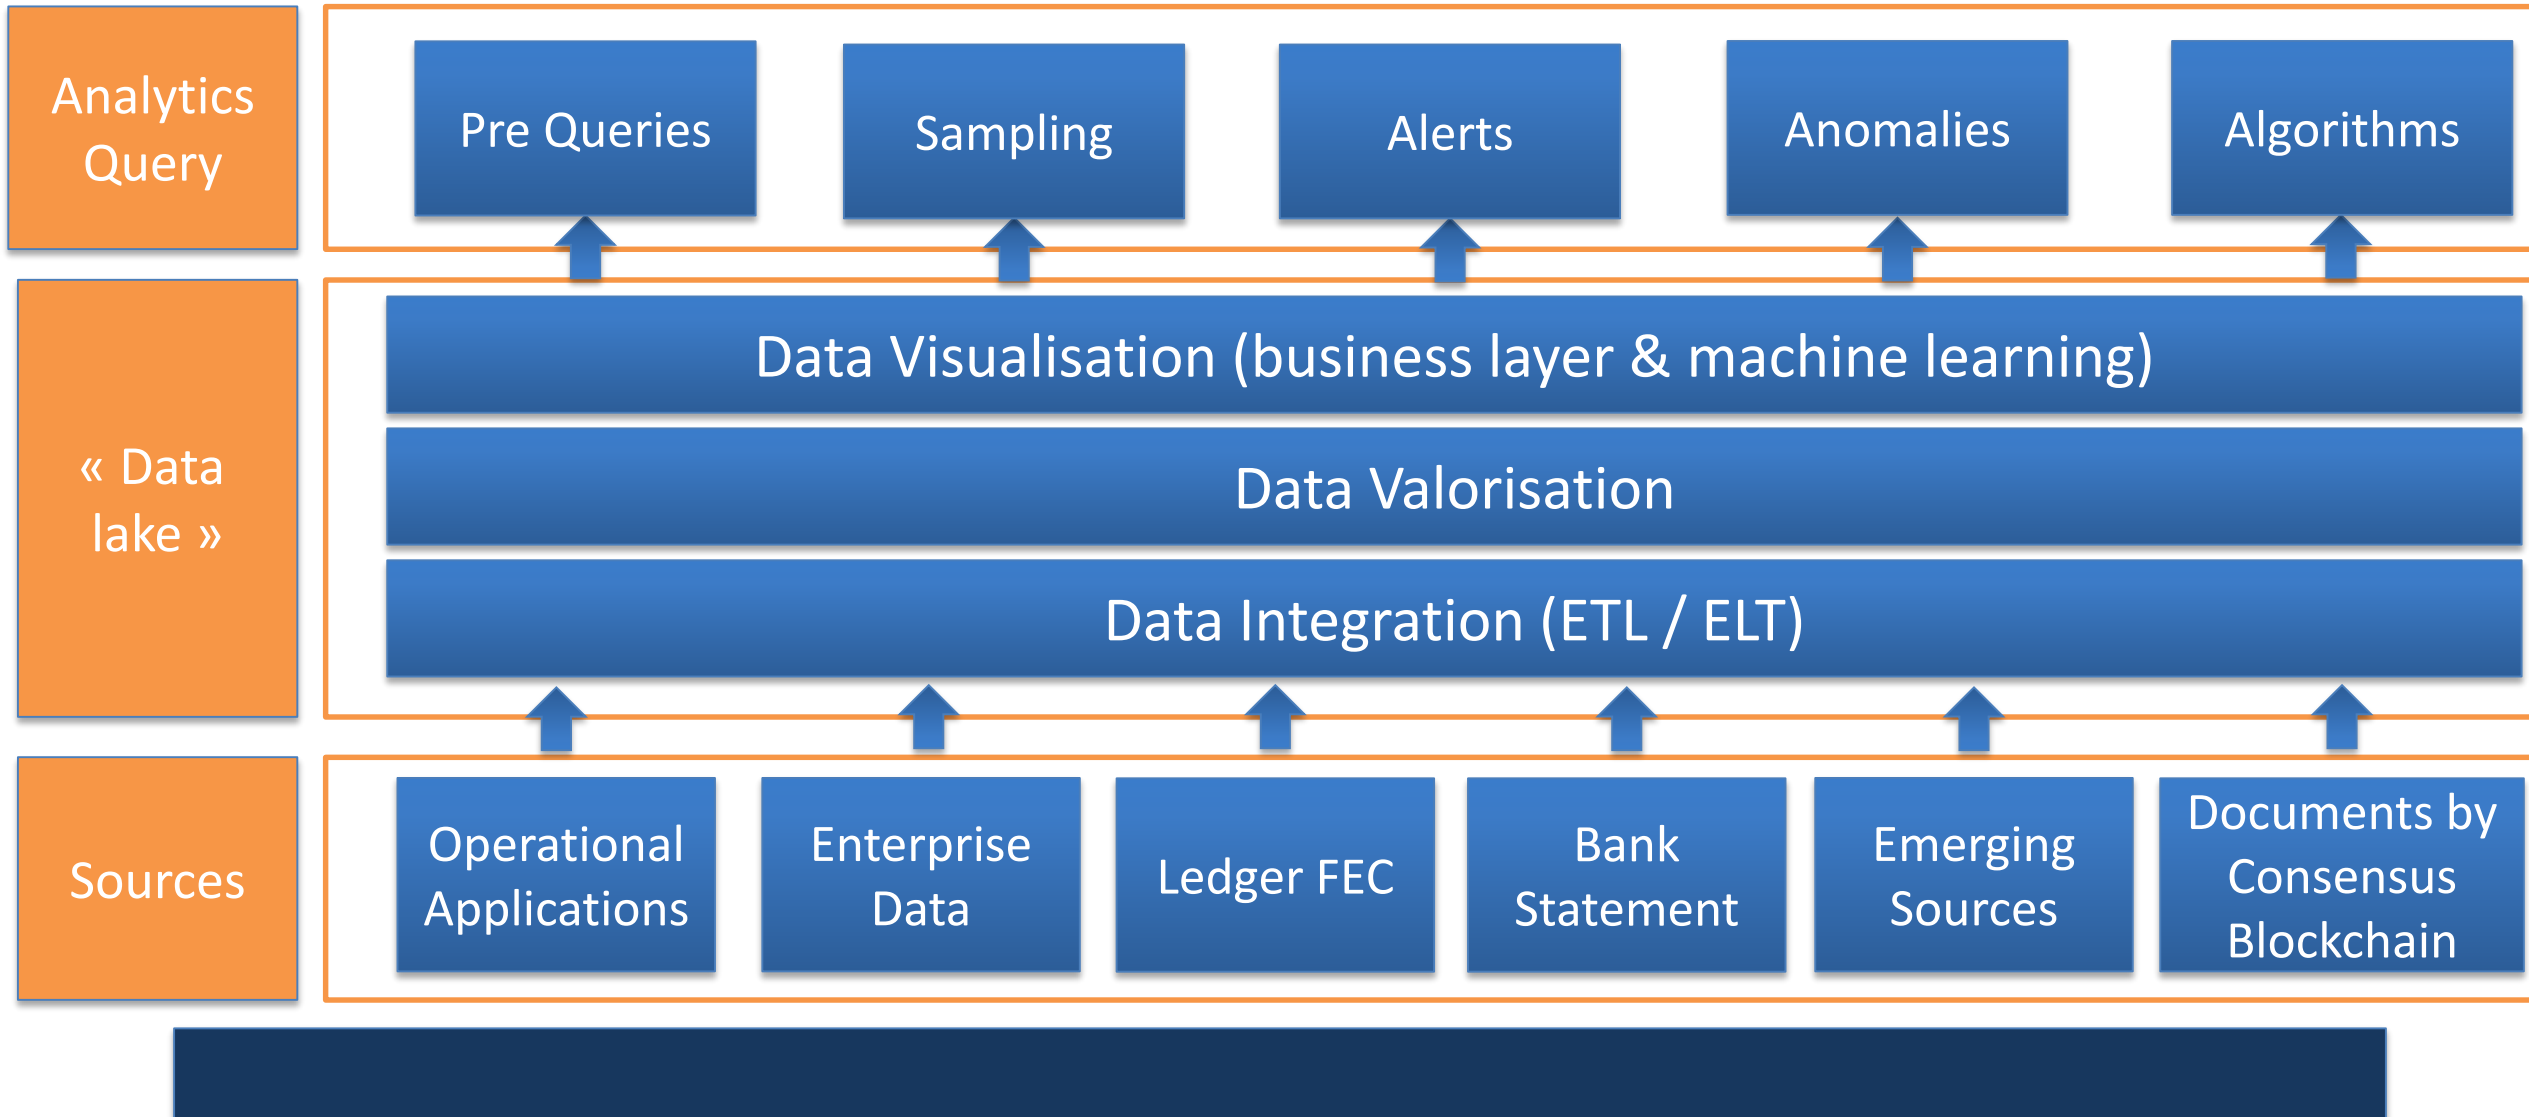

- HTDA offers advanced features such as:
 - real time surveillance;
 - detection of known and unknown fraud and anomalies through Machine Learning;
 - detecting rare activity sequences using Markov Modeling;
 - reduce false alarms using fraud scoring.
