

Ref.: 16902

USE

- For protecting tiles against scratches or abrasive damages caused by the movement between EDGES/CAPS and sensitive tiles, especially when sand or hard particles are present.

MAIN FEATURES

- Reduce the friction coefficient and guarantees the same joint leveling force with minimum user effort.
- Avoid tiles' rotation or any lateral movement if you use lateral tabs as an attachment.
- Guides the "wedge" (Delta system) or the "caps" (Cyclone) through its path.

OTHER FEATURES

- Reusable several times

CAUTION:

Due to the magnified strength (low friction coefficient between contact faces, especially in Cyclone) the same user's effort using this protector (compared with no use it) could become in a premature clip breaking. Please check user's manual carefully to take advantage of it. This low friction coefficient can save you a lot of effort.

TECHNICAL SPECIFICATIONS

- Material: PP virgin COPO
- Color: Grey
- Net weight: 4.9 g
- Single product dimensions: 8.75 x 0.88 cm

PACKAGING

- Packaging: Plastic bag
- Sales unit: 100 units/bag
- Bag dimensions:
- Weight: 500 g approx.

NORM

- N/A
